

| | |
|--|---|
| Connection with SDGs | This KPI is directly related with SDG 6 and SDG 11 and indirectly is related with SDG 3 (access to drinking water is a key part of the health and wellbeing). |
| Opportunities for participatory data collection | This is not a KPI open to participatory collaboration. |

| Net surface water availability | | Water Management Natural and Climate Hazards |
|---------------------------------|--|--|
| Description and cation | Provides an indication of the capacity of available surface water resources to meet the water demands. | |
| Definition | Difference between surface water supply and demand (m ³ /year) | |
| Strengths and weaknesses | | |

| | |
|--|---|
| Measurement procedure and tool | Modelling through Medina del Campo surface water allocation model. |
| Scale of measurement | Groundwater Body scale (Medina del Campo Groundwater Body) |
| Data source. | |
| Required data | Climatic data from local meteorological stations including rainfall, runoff, evapotranspiration, infiltration. |
| Data input type | Historical data series |
| Data collection frequency | Annual |
| Level of expertise required | |
| Synergies with other indicators | Groundwater availability due to the surface-groundwater connections |
| Connection with SDGs | SDG 6 |
| Opportunities for participatory data collection | |
| Additional information | |

4.36 Volume of water removed from water treatment system

Project Name: URBAN GreenUP (Grant Agreement no. 730426)

Author/s and affiliations: Jose Feroso¹, Silvia Gómez¹, María González¹, Esther San José¹ and Raúl Sánchez¹

¹ CARTIF Foundation. Parque Tecnológico de Boecillo, 205, 47151, Boecillo, Valladolid, Spain

| Volume of water removed from water treatment system | Water Management |
|--|--|
| Description and cation | Green infrastructure can prevent rainfall from entering the water treatment system by allowing it to soak into the soil or to evaporate back into the air. |
