Number of Class Diameter	Green Space Management
<b>Description and justification</b>	Indicators of Stages of Forest Stand Development sub-criterion will assess the forest stand stages development.
<b>Definition</b>	A classification of trees based on diameter outside bark, measured at breast height 4.5 feet (DBH) (1.37 m) above the ground or at root collar (DRC). Diameter classes are

	commonly in 2-inch (5 cm) increments, beginning with 2-inches (5 cm). Each class provides a range of values with the class name being the approximate mid-point. For example, the 6-inch class (15-cm class) includes trees 5.0 through 6.9 inches (12.7 cm through 17.5 cm) DBH, inclusive.
<b>Strengths and weaknesses</b>	
<b>Measurement procedure and tool</b>	GIS/Sampling/Model
<b>Scale of measurement</b>	Unit of measure: number of individuals (unitless)
<b>Data source</b>	
<b>Required data</b>	
<b>Data input type</b>	Quantitative
<b>Data collection frequency</b>	
<b>Level of expertise required</b>	Medium
<b>Synergies with other indicators</b>	
<b>Connection with SDGs</b>	15
<b>Opportunities for participatory data collection</b>
